# GeoForAll

Making geospatial education and opportunities accessible to all

GeoForAll Network

GeoForAll is a global collaborative research and educational outreach initiative. GeoForAll is a grassroots network of over a hundred participating labs, research groups, research institutes and universities.

Participants are committed to the use and development of free and open source software; the use of free and open data; the principles of open science in research; and the use of open education in teaching.

Open for All

GeoForAll provides participants the opportunity to join in the creation of a worldwide teaching and research infrastructure. It provides global learning and training opportunities, platforms for capacity development and access to quality education opportunities for all.

GeoForAll and their partners are responsible for growing the next generation of open source geospatial talent! Learn how your institution can participate at **geoforall.org**.

Open Education: GeoForAll offers a rich resource of open materials which can be reused and extended. Freely available resources include: webinars, multilingual courses, newsletters, educational and teaching material.

Open Collaboration: GeoForAll provides its members with the ability to network and collaborate with people all around the world that share common interests and work together in projects and new ideas.

Open Science: GeoForAll contributes to science in general for the benefit of the whole society and for our future generations. Participating students and learners develop creative and open minds which are critical for building open innovation.
